

## EV Iris-Net – Digital Audio Processing

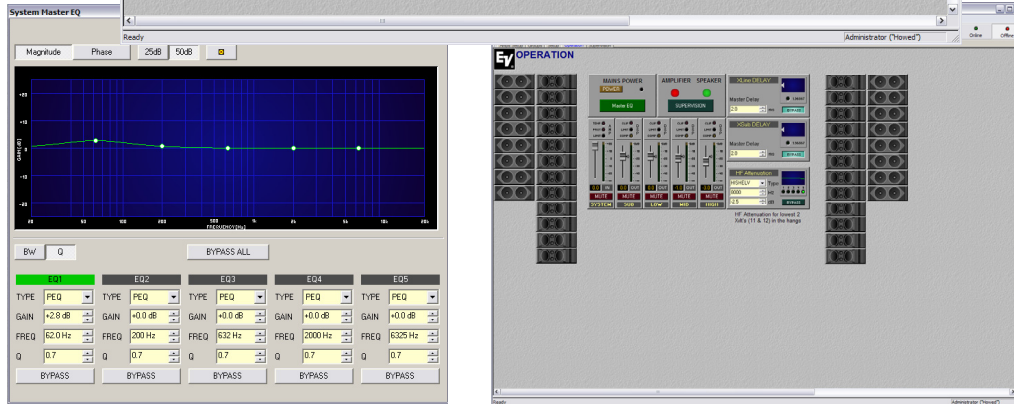

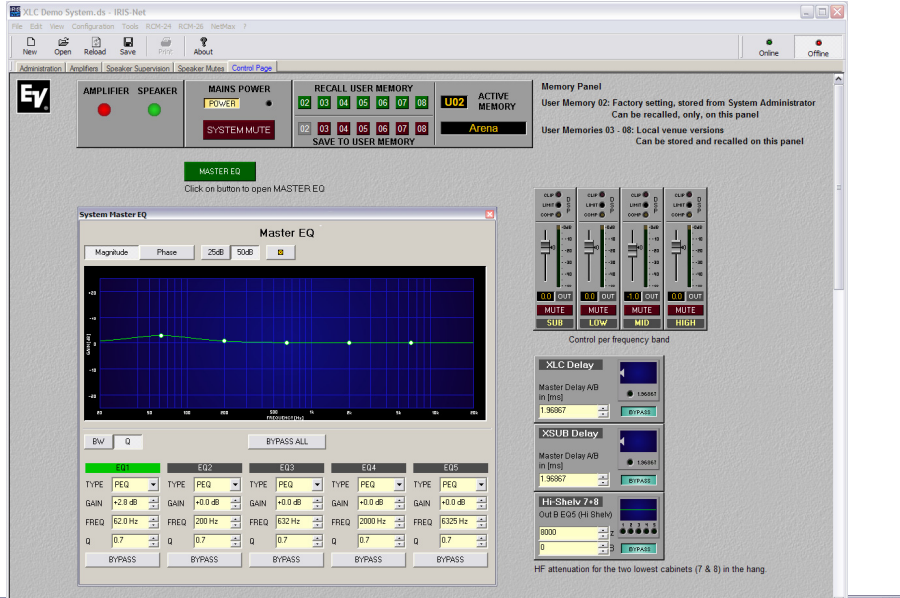

IRIS-Net – Intelligent Remote & Integrated Supervision Network – is an efficient PC-program running under Windows. It allows configuring, controlling and monitoring a complete PA-system from one central location. Controlling and monitoring up to 250 Electro-Voice Remote Power Amps is possible from a single or from several PCs. The IRIS-Net software application provides a complete overview of the entire system status at all times and control of all relevant system parameters. IRIS-Net allows the creation of customized graphical user interfaces to optimally match any application offering easy control and monitoring for large and most complex installations and PA-systems.

Electro-Voice has 75 years of experience in the design and manufacturing of loudspeakers and microphones. But many are not aware that Electro-Voice has 50 years of design experience in power amplifiers and more than 20 years in digital audio processing.

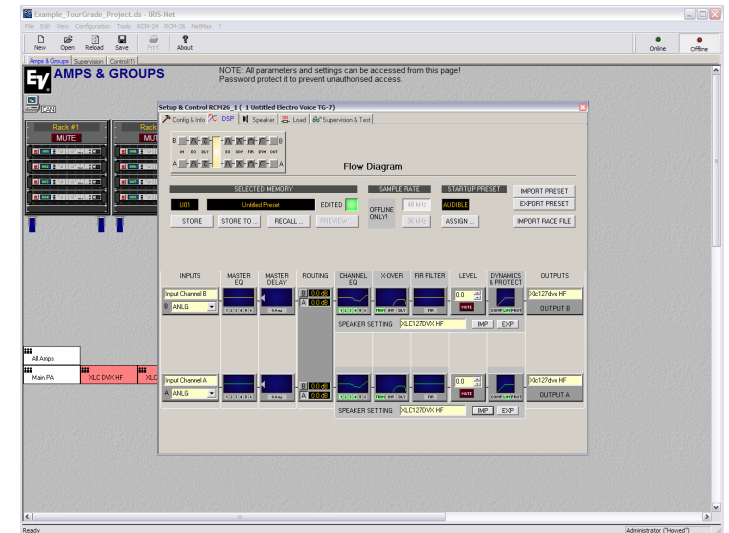

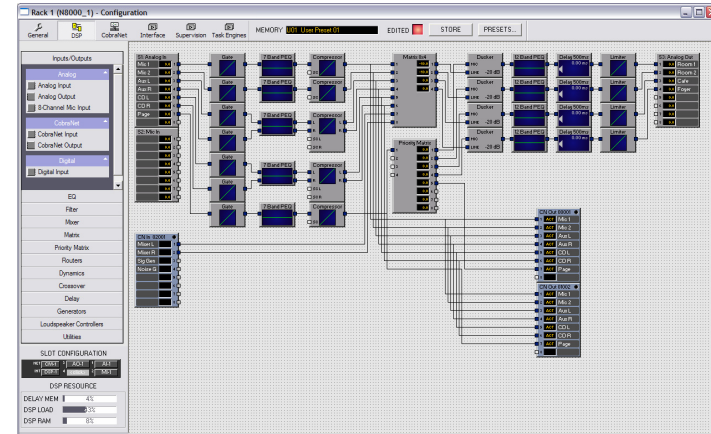

## Comprehensive Control

IRIS-Net provides the system designer with a comprehensive and easy-to-use interface.

## Visually Based Signal Routing

The main design module gives a comprehensive view of the overall system design as it is being built. You can "drill down" in each element to control all functions in the unit.

## Dimension Audio

Unit E2  
Sussex Manor Business Park  
Gatwick Road  
Crawley  
West Sussex, RH10 9NH

## Comprehensive DSP control

IRIS-Net provides a broad array of DSP tools that enable the designer to control nearly any aspect of the audio signal, filters, delays and EQ parameters, along with many other functions that are easily available and can be quickly configured.
